The Schema Framework

Translating Luxury Prose into Machine-Readable Facts

A GEO field guide for luxury travel brands

By Aaqib Osman

Adjectives don't rank on LLMs.

THE REALITY

You can describe a villa as “a breathtaking, soul-stirring coastal sanctuary nestled where the ocean greets the sky.” A human reader will feel the emotion. An AI model parsing the page for a retrieval layer will shrug.

THE PROBLEM

AI search engines (ChatGPT, Claude, Gemini) don't favour poetic beauty. They synthesise answers from entities and attributes. If a property exists purely in flowing prose, it is functionally invisible to the discovery phase of generative search.

THE SOLUTION

You don't need to change the brand's soul. You need a machine-readable fact layer right underneath it.

From words to structured data.

THE CONCEPT

To make a property citable, declare its attributes explicitly. The global framework is Schema Markup (JSON-LD). Nested into the backend of a beautifully written page, it tells an AI what the property is, where it sits, what it contains and what it costs.

THE SHIFT

Prose: “A stunning private pool overlooking the Plett coastline.”

Code: amenityFeature: Private heated pool, value: true

Turn the page for the blueprint.

The VacationRental schema

```
{
  "@context": "https://schema.org",
  "@type": "VacationRental",
  "name": "Branders",
  "brand": {
    "@type": "Brand",
    "name": "Perfect Hideaways"
  },
  "address": {
    "@type": "PostalAddress",
    "addressLocality": "Plettenberg Bay",
    "addressRegion": "Western Cape"
  },
  "containsPlace": {
    "@type": "Accommodation",
    "occupancy": {
      "@type": "QuantitativeValue",
      "value": 8
    }
  },
  "amenityFeature": [
    {"@type": "LocationFeatureSpecification",
      "name": "Private heated pool", "value": true},
    {"@type": "LocationFeatureSpecification",
      "name": "Ocean view", "value": true},
    {"@type": "LocationFeatureSpecification",
      "name": "Outdoor shower", "value": true}
  ]
}
```

Illustrative example. Branders is a placeholder property.

Structure the facts. Preserve the soul.

THE IMPACT

Ask an AI agent, “Where can a family of 8 stay in Plett with a private pool?” and it looks for exact matches on those attributes. Pages with clear structured data are far easier to pull into the context window, select and cite. Pages relying on prose alone are easier to skip.

THE CONCLUSION

The future of digital merchandising isn’t about shouting louder with marketing budgets. It’s about being legible to the systems that sit between the consumer and the booking.
